

1000 Series Floating Dock

Connect-A-Dock 1000 Series

[View 1000 Series Accessories](#)[View 1000 Series Configurations](#)

Providing the ultimate flexibility in configuration, simple installation and extreme durability, the Connect-A-Dock 1000 Series floating dock system is the logical choice for extending your waterfront enjoyment. Its unique connection system allows the Connect-A-Dock to be configured and re-configured in an unlimited variety of shapes to suit your particular needs. The lightweight float sections can be assembled by one person with a wrench.

The environmentally safe polyethylene plastic surface assures season after season of low-maintenance service. The UV-protected, puncture-resistant deck is color-molded with a slip-resistant surface that sheds water and the sun's extreme temperature. Closely spaced support ribs provide rigidity underfoot, while the unique design of the float chambers trap air on the surface of the water for additional buoyancy.

Both the 1000 and 2000 Series docks are best located in protected areas where wave action is less than two feet. The 1000 series configuration is best for farm ponds and small bodies of water. The 2000 series configuration suits small and larger bodies of water. There is an eight-year warranty on Connect-A-Dock products.

With the 8" (20.32 cm) freeboard, the 1000 Series floating dock system is best suited for smaller bodies of water and/or coves that are protected from large waves. This floating dock is ideal for swimming, fishing, boating, or just plain relaxing. Its low profile provides an excellent transition for entering or exiting boats such as kayaks, canoes, and sculls. You can build swim platforms, walkways for wetlands and marshy areas as well as any style of dock your imagination can create.

Applications

Benefits•

Floating dock slip •

Modular design •

Walk-way in marsh/wetland areas •

Easy to install •

Floating dock for cabins and farm ponds •
