

## 2000 Series Floating Dock

Connect-A-Dock 2000 Series

[View 2000 Series Accessories](#)[View 2000 Series Configurations](#)

Providing the ultimate flexibility in configuration, simple installation and extreme durability, the Connect-A-Dock 2000 Series floating dock system is the logical choice for extending your waterfront enjoyment. Its unique connection system allows the Connect-A-Dock to be configured and re-configured in an unlimited variety of shapes to suit your particular needs. The lightweight float sections can be assembled by one person with a wrench.

The environmentally safe polyethylene plastic surface assures season after season of low-maintenance service. The UV-protected, puncture-resistant deck is color-molded with a slip-resistant surface that sheds water and the sun's extreme temperature. Closely spaced support ribs provide rigidity underfoot, while the unique design of the float chambers trap air on the surface of the water for additional buoyancy.

Both the 1000 and 2000 Series docks are best located in protected areas where wave action is less than two feet. The 1000 series configuration is best for farm ponds and small bodies of water. The 2000 series configuration suits small and larger bodies of water. There is an eight-year warranty on Connect-A-Dock products.

With the 17" (43.18 cm) freeboard, the 2000 Series floating dock system is best suited for mooring boats such as ski boats, pontoon boats, sail boats, and catamarans providing an even transition when entering or exiting. Using this unique building block design, you can assemble decks, party barges, boat slips, and just about any other style of dock imaginable.
